

Effective global supply chain management with **LeenRecovery**

Designed for manufacturers of capital equipment or valuable, complex machinery with a large or world wide supplier network. LeenRecovery improves the recovery of part failures costs and preventive actions reporting from suppliers.

LeenTech's' LeenRecovery system is a web based management system that can be used on its own, or integrated with our LeenWarranty system and scales to the size of your business.

“Reject Note data is often collected in some detail, but it is not readily accessible by management and engineers.”

LeenFRACAS

Our Failure Reporting And Corrective Action System extends LeenRecovery to allows users to manage, resolve and measure critical metrics arising from reject notes and warranty claims. By analysing multiple warranty claims and non conforming parts they can linked back to a root cause for actions to prevent recurrence and verification. The system can be adapted to fit Six Sigma, 8D, Lean processes or simple internal quality control process.

Features

- Match part failures to supplier purchase orders.
- Fault reporting analysis; recording critical part failure, with up to 9 other categorisations.
- Workflow processing from reject notes for vendor recovery to FRACAS
- Supplier cost recovery credit/debit request generation.
- Flexible report builder for ad hoc SQL reporting
- Data imports and exports in various data formats, csv, text, Excel etc.
- Transaction based maintenance pricing with unlimited number of users.
